

Contents in brief

1. Introduction 1

- Getting Started on Microsoft Windows®
- Getting Started on Mac OS X®
- Instructions for the textbook and activities
- Instructions for the tutorials

2. Using Cn3D 11

- Cn3D basics
- Viewing and manipulating structures
- Cn3D windows and menus
- Selecting and Viewing Specific Structures
- Coloring options
- Rendering options
- Fine control over rendering, coloring, and labeling with the Global Style menu
- Getting more information about a structure
- Download and open a structure file from the NCBI
- Save an image of a structure
- View or hiding annotations
- Amino acid abbreviation key

3. Molecular Structure Models 33

- What can we learn from molecular structures?
- Where do molecular structures come from?
- What is in a structure file?

4. Exploring DNA Structure 41

- Learning objectives
- Introduction

Overview of DNA structure

Transmission of Genetic Information

5. A Guided Tour of DNA Structure

51

Identify the major and minor grooves

Investigate interactions between DNA and other molecules

Compare the orientation of the two DNA strands

The building blocks of DNA

The DNA backbone

How are the two DNA strands held together?

Transmitting genetic information to the next generation

Base pairing in double-stranded DNA

Investigate other DNA structures

Further investigation using the Internet

DNA Structure Worksheets

69

Major and Minor Grooves

Investigate interactions between DNA and other molecules

Compare the orientation of the two DNA strands

The building blocks of DNA

The DNA backbone

How are the two DNA strands held together?

Transmitting genetic information to the next generation

Base pairing in double-stranded DNA

Investigate other DNA structures

Further investigation using the Internet

Double-stranded DNA
